STOP THE SPREAD
Infection prevention and control to stop the spread of antibiotic resistant organisms is an essential part of effective antimicrobial stewardship.

STEWARDSHIP IS A TEAM SPORT
Stewards work together with pharmacy, microbiology, infection prevention, information technology, executives, front-line clinicians, and others to optimize antibiotic use. The development and refinement of local guidelines and care pathways can be considered part of the teamwork that stewards do.

ESSENTIAL ROLE OF MICROBIOLOGY
A hallmark of antimicrobial stewardship is helping clinicians obtain an accurate diagnosis.

USE IT AND LOSE IT
Resistance is predictable and antibiotic overuse is directly linked to the development of antibiotic resistance.

USE WHAT YOU NEED, AND NOTHING MORE
Antibiotic stewardship means optimizing antibiotics. Use the right drug for the right patient for the right indication at the right dose for the right duration.
